

STUDIO RECORDING CHECKLIST

Capturing the Schotman A/B — the same riff, played on every guitar

THE GOLDEN RULE

Change ONE thing only — the guitar. Same amp, settings, cable, mic in the same spot, same pick and strings if you can. If it isn't the guitar, keep it identical. That's what makes the comparison honest.

GEAR

- ☐ Amp + cab · mic on a stand (SM57 is fine) · interface · laptop with a DAW set to 48 kHz / 24-bit
- ☐ Bonus: also record the dry DI in parallel (split the signal) — lets us reprocess later without a re-visit

LOCK YOUR CHAIN — NOTE IT DOWN ONCE, THEN DON'T TOUCH IT

Amp / channel: _____ Gain __ Bass __ Mid __ Treble __ Presence __ Master __

Mic: capsule ~2–3 cm off the grille, halfway between cone centre & edge · Pickup: BRIDGE, vol/tone full

PER GUITAR — PLAY THE SAME RIFF EACH TIME (2–3 TAKES EACH)

- ☐ Riff — clean tone
- ☐ Riff — crunch / mid-gain
- ☐ Riff — high-gain / lead
- ☐ One note held until it dies completely (gives us real sustain + the tone 'fingerprint')
- ☐ One open chord, let it ring out

NAME EVERY FILE LIKE THIS (SO IT DROPS STRAIGHT INTO THE SITE)

<guitar>_<take>.wav e.g. 8141sgreen_clean.wav 8141sgreen_highgain.wav 8141sgreen_note.wav

Use the same guitar tag every time. Record one non-Schotman "stock_..." guitar too — that's the A/B.

BEFORE YOU LEAVE

- ☐ Levels peak around –6 dB — never clipping
- ☐ Mic position & every amp knob identical across ALL guitars
- ☐ One "stock" reference guitar recorded through the exact same chain
- ☐ Every take slated/announced, every file named, folder backed up to a 2nd drive
- ☐ Export WAV (48 kHz / 24-bit) and send Kevin the whole folder
